Daihatsu Partially Upgrades Move Canbus Mini Passenger Vehicle

The addition of Smart Assist III further improves safety functions

Move Canbus G "Make up SAIII"

Daihatsu Motor Co., Ltd. has partially upgraded the Move Canbus mini passenger vehicle and will release it nationwide on Monday, September 11.

The Move Canbus mini passenger vehicle was first launched in September 2016. In recognition of recent behavioral trends among women, it was designed and developed to target women who make minor lifestyle changes as a means of enhancing enjoyment.

Over the last few years, there has also been an increase in the number of women who live with their parents, and there is a growing tendency for car use to be shared among such households. Having noted such trends, Daihatsu aimed to develop a mini vehicle that was easy to use for people of all generations. The unique design and two-tone colors of the Move Canbus have been widely praised, along with its highly convenient packaging and sliding doors. As a result, in the year or so since its launch, total sales have exceeded 80,000 vehicles¹.

The current partial upgrade sees the addition² of the collision avoidance system, Smart Assist III, which also detects and engages emergency braking for pedestrians. The Move Canbus supports driving and parking through Smart Assist III and the existing Panorama Monitor³, and has evolved into a vehicle that provides even greater safety and peace of mind than ever before.

In recent years, there has been an increasing emphasis on safety equipment. In December 2012, Smart Assist became the first collision avoidance system to be featured on a mini vehicle. Since then, it has been requested by a large number of customers and equipped to a total of more than 1.4 million vehicles¹. Already equipped on the Tanto, Mira e:S and Move, the Move Canbus is the fourth model to feature the most recent edition of the system, Smart Assist III. Going forward, Daihatsu intends to roll out the cutting-edge Smart Assist III to even more models, and thereby continue to support the safety and the mobility lives of its customers.

*1: As of the end of August 2017, according to research conducted by Daihatsu

*2: Smart Assist III is equipped to all SAIII grades.

*3: The Panorama Monitor is available as a manufacturer option, "Panorama Monitor Genuine Navigation Equipment Upgrade Pack," on all grades with the exception of the L and L SAIII grades. The Panorama Monitor also requires the dealer option, "Panorama Monitor Navigation (8-inch or 7-inch)," to be equipped.

*4: As of December 2012, according to research conducted by Daihatsu

Overview of partial update

- The addition of the collision avoidance system, Smart Assist III²
- Revisions to some grades and manufacturer options
