## Cumulative Sales of Vehicles Equipped with Smart Assist Top 1,500,000

Daihatsu Motor Co., Ltd. has now sold a total of 1.5 million vehicles\*<sup>1</sup> equipped with the Smart Assist collision avoidance system, as of the end of November 2017.

Daihatsu first equipped Smart Assist to the partially redesigned Move in December 2012. It was the first mini vehicle to be equipped with collision avoidance support braking and other advanced technologies at an affordable price. In April 2015, the system evolved into Smart Assist II, which gained monocular cameras in addition to the existing laser radar technology. Then, in November 2016, Daihatsu launched Smart Assist III. The latest version of the system utilizes the world’s smallest stereo cameras\*<sup>2</sup>, and its collision avoidance support braking is now able to react to pedestrians.

At present, Smart Assist is equipped to a total of 11 different models\*<sup>3</sup>—nine mini vehicles and two compact cars—and, going forward, Daihatsu intends to roll the system out to commercial vehicles as well. Of the current line-up of models equipped with Smart Assist, approximately 80–90 percent of customers choose to purchase grades that have Smart Assist installed. The functionality and affordability of the system have received widespread praise.

Daihatsu has also teamed up with sales companies nationwide to implement the “Safety and Peace of Mind for Everybody” project, through which customers can test ride vehicles equipped with Smart Assist and experience the system in action. In order to provide safety and peace of mind to as many customers as possible, going forward Daihatsu will continue to actively promote the widespread uptake of Smart Assist.

		Model name	Date Smart Assist was first equipped
Mini vehicle (9 models)	Passenger vehicle (7 models)	Move	December,2012
		Mira e:S	August,2013
		Tanto	October,2013
